

## Java class

### Table

```

+ chefOneEat : boolean
+ chefTwoEat : boolean
+ chefThreeEat : boolean
+ ingredOnTable : String
+ count      : int
+ iteration   : int

+ Table(int)
+ appoint(int): void
+ notEmpty(): boolean
+ buildIngrede(): void
- putIngrede() : void
+ chefOneEat(): void
+ chefTwoEat(): void
+ chefThreeEat(): void
- eat(): void
+ resetTable(): void
    
```

```

Agent
+ Agent(Table)
+ run(): void
    
```

```

chefOne
+ chefOne(Table)
+ run(): void
    
```

```

chefTwo
+ chefTwo(Table)
+ run(): void
    
```

```

chefThree
+ chefThree(Table)
+ run(): void
    
```

-table

-table

-table

-table

-jam

-bread

-peanut butter

-ingre-  
dients

```

runme
+ runme()
+ main(String[]) : void
    
```

```

Ingredient
+ name : String
+ Ingredient(String)
+ getName(): String
    
```
